

Hello,

I am a master's student graduating in May 2025, specializing in computer architecture and machine learning. My thesis focuses on the characterization of LLM's execution on a CPU, looking for what improvements could be made to the cache system with prefetching and replacement policies.

I would like to be a part of the AheadComputing team to work towards creating powerful RISC-V processors. Attached is my resume, I look forward to hearing from you!

Respectfully,

Spencer Banasik

Texas A&M Student
