

Hi my name is Gokce Pilli. I am a Electrical Engineer at Belcan in Platteville, Wi. I have been at Belcan for the past 5+ years. Doing test environment development for avionic embedded systems and fpga design verification for avionic system certifications. I got my Bachelors and Masters degree from UW - Madison. With focus on VLSI design and verification. I saw that AheadComputing had open verification engineering position and I wanted to go for it. Hope to hear back from you and have an opportunity for an interview.
