

Hi,

I'm a current student at Carnegie Mellon University and I'm interested in the RISC-5 mission AheadComputing is on.

I was wondering if there is a possibility to join the company for a summer internship? I know things are new and the typical infrastructure to support temporary work like interns may not be there but I'd love to make it work.

I've attached my resume below.

Best,

Roman Kapur

We love interns! Internships are a great way for students to connect industry needs with their academic studies. Internships are also a fantastic way for industry to see the best and brightest up-and-coming engineers solve problems with innovative solutions. Unfortunately, AheadComputing is not yet ready to offer high impact and rewarding internships. Please check back with us later, either for full-time opportunities or an internship after the summer term.

Sincerely,

Jonathan
