### Letter of Recommendation

Doreen has been an invaluable asset to the company within a year of her recruitment. She is industrious, enthusiastic, and multitasked, bringing with her unique zestfulness and energy.

Doreen joined as an Associate Software Engineer; as her Project Manager I often had occasion to directly supervise her work and provide feedback, or alternatively do so through her Team Lead. Her duties primarily included configuring CAN, LIN, and UDS frames and debugging codes. She also conducted unit-level testing on the same through INCA, UDE, and Vector CANalyzer. She concluded these tasks meticulously and methodically, ensuring that no element was left unconsidered. She also worked on Unified Diagnostic Services-DID configurations, another task she conducted with immense finesse. The analysis of buggy log reports and support services for the DTML project within the Artificial Intelligence and Machine Learning department were also assigned to her. Doreen balanced the demands of the EMR and AIML departments that required the application of different skill sets and perspectives. Her efforts were praiseworthy and indicative of her dependability at large. Doreen was also charged with supervising the JIRA processes for varying projects and handling Basic Functionality Tests for specified tasks. Her impeccable time management was well-appreciated.

Doreen was always amenable to advice and diligently incorporated suggestions into her method of working. She was receptive to guidance that came her way, particularly when I would encourage her to explore different departments and expand her technical horizons. She was resilient through challenging times or demanding duties, emerging from such situations more competent and confident. Ever-earnest in her search for more knowledge, she stayed updated on cutting-edge technologies in the automobile sector. This mentality allowed her to contribute to the organization in multiple ways, as she was genuinely invested in its advancement. More than any other admirable trait, Doreen was a warm and dynamic team player, winning the "Most Active Female Participant" courtesy of enthusiasm and vigour.

As much as Doreen will be missed, the Master's program at your University will be the apt platform to elevate her capabilities. The world-class resources, training, and pedagogy will help her cultivate expertise in the field she wishes to make a mark in, and I am glad to advocate her admission to the same.
