

Hi,

I am writing to express my interest in working at Ahead Computing for CPU Micro-architecture and RTL design engineer role. I have close to 10 years of experience in IP design and micro-architecture working at Intel on ground up development of the Industry first Computer Express Link .Cache .Mem controller IP. I have worked on IP through three generations and multiple products for both host and device side. While I don't have experience working on a CPU design, I strongly feel my experience working on IP micro-architecture and implementation can help me contribute to logic design at Ahead Computing. I have attached my resume for your reference.

I look forward to the possibility of discussing my potential role at the company.

Thanks

Binal
