Hello Hiring team,

Im reaching out to sound out the prospect of a chance to work at Ahead computing.

Assuming that many people might have similarly reached out for an opportunity, I will refrain from a novel on why Im interested and say heres me:

Obsessed with anything electronics.

Love tinkering around to find efficient ways to do things.

Have been studying regarding patents in order to be patent aware knowing what to lookout for and any possible pitfalls wheat comes to inventions

Havent met a stranger yet, love talking to people and working together.

Its interesting on how Ahead computingplans to create a more efficient risc v processor for general computing, I especially like the sound of achieving greater energy efficiency without sacrificing performance.

I might not fit your requirement of the senior engineers that you are looking for, but if you are open to the prospect of hiring an engineer at the entry level

, Im happy to jump on a call:

Email me back at:

Best,

Sriram

Btw:Im attaching my resume below

Wanted to give this a bump. You are my top choice, so you cant blame me for swinging for the fences, can you?.sriram
