Dear Hiring Manager,

I would be keen on applying for full-time roles starting immediately that cuts across the domains of hw-sw codesign and computer architecture at Ahead Computing. I have worked in these domains over the last 2 years and my undergraduate thesis was on developing a multimodal ADAS pipeline using computer vision (CUDA) for cognitive load estimation. My most recent research internship at NVIDIA involved LLM training and inference time reduction using GB200 NVL72 servers. I am sharing my updated CV for your reference. I am writing to request being referred for a role that might be a good fit for my profile. Thank you for considering my request.

Regards,

Ketan Anand
